EECS 4413 - Project Report		Mark
Implementation		/75
The degree in which all use cases are implemented in UI and working		
<i>Distinguished use case or feature (not specified by instructor, each team can choose)</i>		
UI navigability and support of use cases		
Robustness (including client side validations)		
The degree in which it uses cloud and containers		
The degree in which it follows REST (HATEOS) and microservice principles		
Ease of install/run		
<i>Additional Comments:</i>		
Report Content		/10
Explanation of a distinguishable feature (examples: LLM based chatbot to support bidding using NL, autoscaling with agents). A short report about validation. For example, show the accuracy of the chatbot or autoscalers and examples of system prompt you tried to achieve high accuracy.		
Performance Report (Response time as a function of arrival rate, use JMeter to generate load)		
Testing report (describe the failure rates, estimate the cpu testing time needed to eliminate all bugs. Assume $\lambda_0=500$.)		
Team member part (description of the work of each team member)		
Report Writing Quality		/5
Consistency (box names, legends, etc)		
Diagrams and tables are explained in the text (Diagrams have legends)		
References inserted where necessary		
Document is proofread		
Use of fonts is consistent across the document		
Screenshots of UML diagrams with readable fonts, edges and arrows		
Demo quality		/10
<i>Additional Comments:</i>		
Penalty for being late, failing to acknowledge GenAI use, not understanding the code		
Total		/100
